SECURE

REAL-TIME
VERIFICATION

DECENTRALIZED
BY DESIGN

BUILT FOR
THE FUTURE

VERIFIABLE. TRUSTED. UNSTOPPABLE.

INVESTMENT MEMO

THE PROOF LAYER FOR THE POST-QUANTUM ECONOMY

QuFi is the neutral verification layer that sits beneath every blockchain, moving asset, institution, and AI agent. We bring post-quantum security, real-time verification, and global scale to the value layer of the internet.

THE MOMENT IS NOW

The world is entering a post-quantum era. Digital assets, tokenized real-world assets, institutions, and AI agents are moving value at a pace the existing infrastructure was never designed to handle.

QuFi delivers the missing layer: a neutral, post-quantum, verification network that delivers cryptographic certainty before value moves and preserves decentralization without forcing migration.

NEUTRAL LAYER

We don't replace
what works.

NO MIGRATION

Zero disruption
for chains.

NO STATE

No state
replication.

POST-QUANTUM SECURITY

Quantum-resistant
by design.

OUR MISSION: Power the world's digital economy with verifiable trust.

OUR VISION: Become the default verification layer
for global financial infrastructure.

02.

THE TECHNOLOGY & PRODUCT

THE FIRST VERIFICATION LAYER THAT
DOES NOT SETTLE. IT VERIFIES, PROVES, AND PROTECTS.

QuFi is the neutral verification layer that sits beneath every blockchain, moving asset, institution, and AI agent.

It provides real-time, post-quantum verification of instructions, identities, state, and value—producing a compact, verifiable proof that any chain or system can trust.

WHY QUFI? (WHY THE WORLD NEEDS QUFI)

- Post-quantum threats are real and imminent.
- Existing infrastructure was not built to scale.
- Institutions require neutrality and verifiability.
- Multi-chain growth demands a new layer.
- Verification is the last missing primitive.

KEY CAPABILITIES

- Post-Quantum Security
- Real-Time Verification
- Proof-Gated Execution
- Global Scale
- Multi-Chain by Design
- Developer Friendly

INSTRUCT → VERIFY → SETTLE

INSTRUCT

A transaction or financial action is defined.

VERIFY

QuFi performs the verification and produces a compact, verifiable proof.

SETTLE

The chain receives the proof and settles the resulting state.

QuFi verifies everything that matters before it ever reaches a chain, exchange, or system.

We create certainty before value moves.

QUFI VERIFICATION LAYER ARCHITECTURE

ANY SOURCE

- Blockchains
- Institutions
- AI Agents
- Systems & APIs

QUFI VERIFICATION LAYER

NEUTRAL • POST-QUANTUM • DECENTRALIZED

- Instruction Ingestion
- Verification Engines
- Proof Generation
- Proof Aggregation

POST-QUANTUM CRYPTOGRAPHY & SIGNING (ML-KEM + ML-DSA)

DECENTRALIZED VERIFICATION NETWORK
20,000+ VERIFICATION NODES WORLDWIDE

ANY DESTINATION

- Public Chains
- Private Chains
- Settlement Systems
- Financial Networks

OUR MISSION:

Power the world's digital economy with verifiable trust.

OUR VISION:

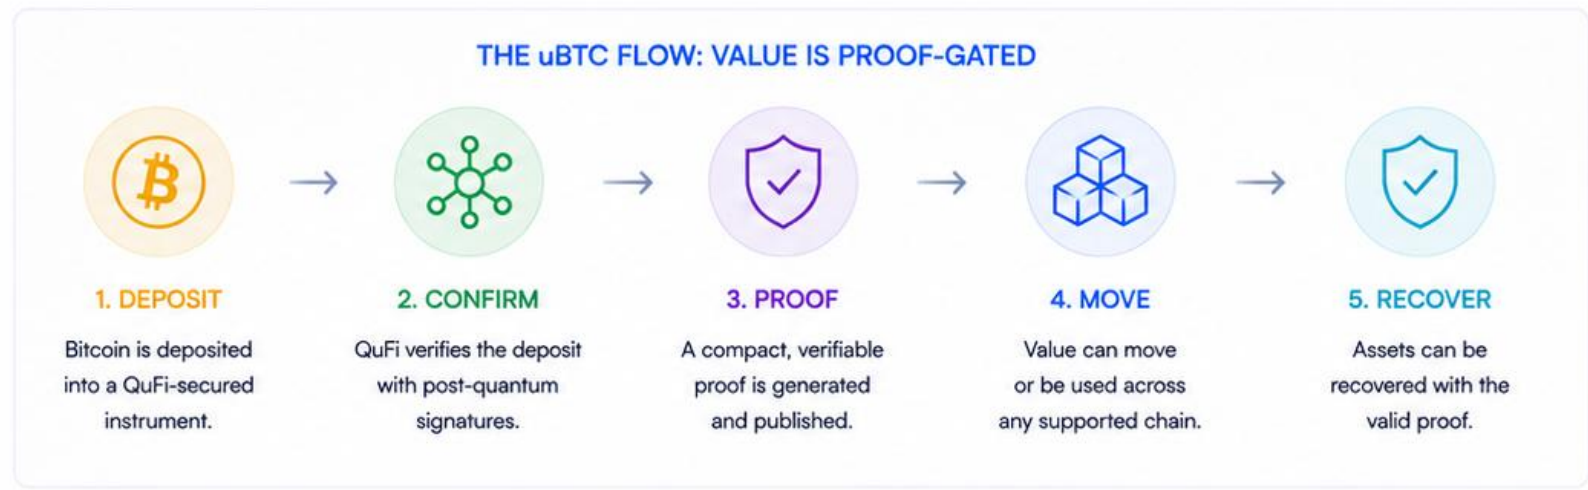

Become the default verification layer for global financial infrastructure.

03. PROOF THAT THE MODEL WORKS

uBTC: OUR BITCOIN-BACKED PROOF OF CONCEPT

uBTC demonstrates the full QuFi model. Bitcoin is locked. A post-quantum proof is created. Only then can value move.

This removes custodial risk and proves verification at scale.

WHY uBTC MATTERS

- Real Bitcoin, backed 1:1
- Post-quantum security (ML-KEM + ML-DSA)
- No wrapped tokens or synthetic risk
- Proof-gated movement across chains
- Recoverable, verifiable, and auditable
- Trust minimized. Security maximized.

OUR VISION: Become the default verification layer for global financial infrastructure.

04. VERIFICATION BEFORE VALUE

THE DEFAULT TRUST LAYER FOR GLOBAL FINANCE

QuFi establishes a new financial paradigm: nothing moves until it is cryptographically verified, policy-compliant, and network-approved.

Every instruction, action, and transaction is verified in real time by a decentralized network of independent nodes.

Trust is not assumed. It is proven.

THE VERIFICATION PROCESS

CORE VERIFICATION FEATURES

Post-Quantum Secure

Built with ML-DSA and Falcon for future-proof trust.

Real-Time Verification

Instant proof generation and status updates at global scale.

Multi-Chain Ready

Works across any supported blockchain or network.

Policy-Governed

Every action is evaluated against programmable rules before execution.

COMPARISON: QUFI vs TRADITIONAL SYSTEMS

CAPABILITY	QUFI	TRADITIONAL SYSTEMS
 Trust Model	 Cryptographic verification	 Centralized trust
 Verification	 Real-time, on-chain proof	 Delayed or manual
 Security	 Post-quantum secure	 Quantum vulnerable
 Scale	 Global, decentralized network	 Limited, siloed systems
 Policy	 Programmable, enforced upfront	 After-the-fact controls
 Auditability	 Full transparency & traceability	 Partial or opaque

05.

uBTC: VALUE MOVES ONLY WHEN PROVEN

OUR BITCOIN-BACKED PROOF OF CONCEPT

uBTC demonstrates the full QuFi model.

A post-quantum proof is created. Only then can value move.

This removes custodial risk and proves verification at scale.

THE uBTC FLOW: VALUE IS PROOF-GATED

1. DEPOSIT

Bitcoin is deposited into a QuFi-secured instrument.

2. CONFIRM

QuFi verifies the deposit with post-quantum signatures.

3. PROOF

A compact, verifiable proof is generated and published.

4. MOVE

Value can move or be used across any supported chain.

5. RECOVER

Assets can be redeemed with the valid proof.

WHY uBTC MATTERS

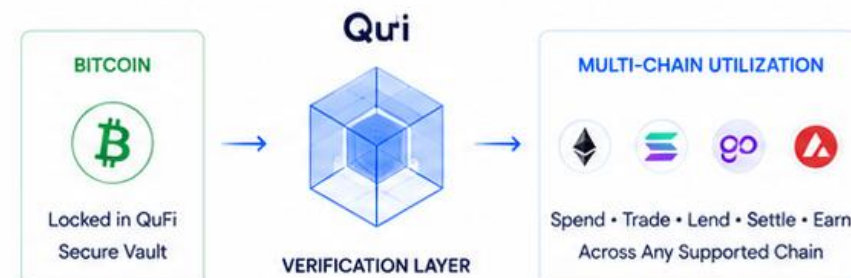

- ✓ Real Bitcoin, backed 1:1
- ✓ Post-quantum security (ML-DSA + ML-DSA)
- ✓ No wrapped tokens or synthetic risk
- ✓ Proof-gated movement across chains
- ✓ Recoverable, verifiable, and auditable
- ✓ Trust minimized. Security maximized.

06. BUILT BY EXPERTS. DRIVEN BY MISSION.

QuFi is built by a team of leaders in cryptography, blockchain architecture, product innovation, and growth strategy—uniting deep technical expertise with real-world execution to build the default verification layer for the digital economy.

EXPERTISE

World-class team with deep technical and industry experience.

MISSION-DRIVEN

Focused on building the default verification layer for global finance.

GLOBAL VISION

Building infrastructure for a borderless, trust-powered future.

COLLABORATIVE

Partners, validators, and communities aligned to a shared mission.

LEADERSHIP TEAM

DR. ALEXANDER REAY

TECHNOLOGY

Cryptography and post-quantum security expert. Architect of QuFi's verification infrastructure and uBTC proof system.

SAMSON LEE

BUSINESS

Strategic business builder with deep experience in Web3, DeFi, and institutional partnerships across global markets.

ERIC BENZ

GROWTH

Growth and communications leader with a track record of scaling global brands and driving ecosystem adoption.

Our mission:

Power the world's digital economy with verifiable trust.
