

QuFi PRODUCTS

BUILDING THE VERIFICATION LAYER
FOR THE FUTURE OF FINANCE

A suite of next-generation products and infrastructure that deliver real-time, post-quantum verified value across any asset, any chain, any use case.

THE QUFI PRODUCT STACK

APPLICATION
LAYER

Use cases & applications built on QuFi infrastructure. uBTC, tokenization, payments, DeFi, institutional systems.

POLICY
LAYER

Programmable policies for authorization, compliance, limits, rules, and controls that govern value movement.

VERIFICATION
LAYER

Distributed verification network that validates state, proofs, policies, and authorizations in real time.

CRYPTOGRAPHIC
LAYER

Post-quantum cryptography (ML-DSA & Falcon), key management, signatures and proof systems.

NETWORK &
SETTLEMENT
LAYER

Interoperable connectivity with blockchain, payment rails, and legacy systems.

CORE CAPABILITIES ACROSS ALL PRODUCTS

VERIFIABLE TRUST

Cryptographically verified by a distributed network of independent nodes.

POLICY CONTROL

Granular, programmable policies enforced automatically in real time.

POST-QUANTUM SECURE

Built with ML-DSA and Falcon for quantum-resilient security.

ASSET AGNOSTIC

Works with any digital asset, token, or real-world instrument.

CROSS-CHAIN &
CROSS-SYSTEM

Interoperable by design across chains, rails, and institutions.

INSTITUTIONAL GRADE

Built for compliance, auditability, resilience, and enterprise scale.

FAST & EFFICIENT

Real-time verification and settlement with low latency & cost.

UBTC: OUR FIRST APPLICATION — FULL LIFECYCLE

1. BTC COLLATERAL

Bitcoin is deposited into institutional, policy-controlled custody.

2. VERIFICATION

QuFi verifies collateral existence, custody state and policy compliance.

3. UBTC MINT

uBTC is minted 1:1 against verified BTC collateral under QuFi policies.

4. CONTROLLED
MOVEMENT

uBTC moves across authorized networks with real-time policy control.

5. BURN

uBTC is burned when returning to BTC or when redeemed.

6. REDEMPTION

BTC is released back to custody or into original system.

7. AUDIT & REPORT

All actions are logged, verifiable and auditable in real time.

Every uBTC in circulation is 100% backed. Every action is verifiable. Every movement is policy-controlled.

QuFi Products power the verification layer for a new era of **trusted digital value**.

02. HOW QUFI WORKS

From Instruction to Trusted Settlement

QuFi transforms an intent into a verifiable, policy-compliant and cryptographically proven settlement.

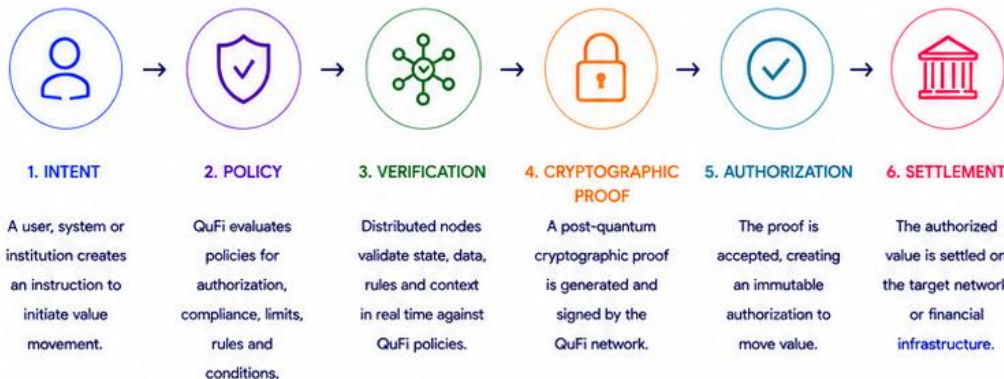

We do not move value.

We verify, control and authorize it.

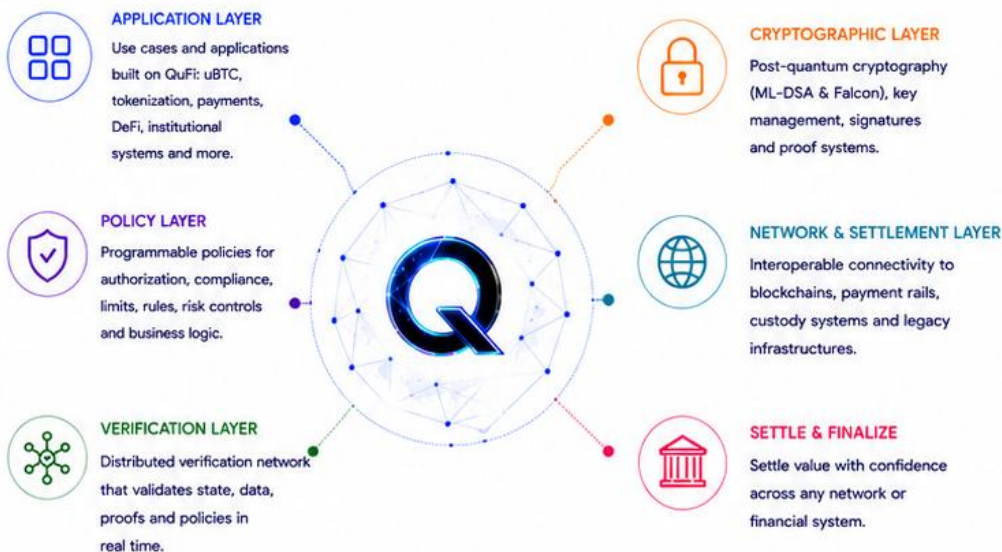

At no point does QuFi custody or control user assets.
We verify and authorize —
institutions and networks settle.

THE END-TO-END VERIFICATION FLOW

HOW THE QUFI VERIFICATION LAYER WORKS

VERIFIABLE BY DESIGN

Every action is cryptographically verified by a distributed network of independent nodes.

POLICY-CONTROLLED

Only valid, authorized and policy-compliant instructions can result in settlement.

FUTURE-PROOF

Post-quantum secure, interoperable and built for a multi-network world.

QuFi is not an application. It is the **verification infrastructure** that makes trusted value movement possible.

QuFi is the verification layer for institutional digital value.

Verifiable. Secure. Policy-controlled. Future-proof.

WHO QUFI SERVES

Infrastructure for Every Institution That Moves or Manages Value

QuFi is designed as neutral, open infrastructure that any trusted participant can use. Our verification layer sits at the heart of digital value movement, providing the assurance, control and cryptographic proof institutions require.

Different users. One infrastructure.

All connected by the QuFi Verification Layer.

From global banks to developers, from exchanges to governments — QuFi provides the trust layer that makes digital value verifiable, policy-controlled and safe to move.

QuFi is not built for one application.

It is infrastructure for every institution that needs digital value to be trusted before it moves.

BANKS & FINANCIAL INSTITUTIONS

Use QuFi to issue, move and settle digital assets with full policy control and verifiable assurance.

- ✓ Institutional settlement & clearing
- ✓ Collateral & margin management
- ✓ Tokenized deposits & liabilities
- ✓ Cross-border payments
- ✓ Regulatory reporting & auditability

ASSET MANAGERS & INVESTORS

Leverage QuFi to manage tokenised assets and liquidity with real-time verification and policy controls.

- ✓ Tokenized funds & real-world assets
- ✓ Treasury & liquidity management
- ✓ Secure asset transfer & settlement
- ✓ Risk-managed portfolio operations
- ✓ Transparent reporting & proof

ENTERPRISES & CORPORATES

Use QuFi for treasury, payments and internal asset movement with policy-driven controls and real-time proof.

- ✓ Enterprise payments & collections
- ✓ Treasury & cash management
- ✓ Internal asset & value movement
- ✓ Supply chain & vendor payments
- ✓ Compliance & internal audit

EXCHANGES & CUSTODIANS

Rely on QuFi for secure movement, proof of reserves and verifiable settlement across digital and traditional assets.

- ✓ Secure asset verification
- ✓ Proof of reserves & liabilities
- ✓ Exchange settlement & transfers
- ✓ Custody & omnibus controls
- ✓ Audit trails & transparency

DEVELOPERS & PROTOCOLS

Build the next generation of financial applications on top of QuFi's verification infrastructure and primitives.

- ✓ Access verification primitives & APIs
- ✓ Build policy-controlled applications
- ✓ Create tokenized assets & products
- ✓ Integrate verification & proof services
- ✓ Join the QuFi ecosystem

GOVERNMENTS & PUBLIC INFRASTRUCTURE

Use QuFi to build trusted, transparent and verifiable digital infrastructure for citizens and public systems.

- ✓ Trusted digital infrastructure
- ✓ Cross-border value corridors
- ✓ Public asset tokenization
- ✓ Identity & entitlement systems
- ✓ Verifiable public-sector payments

WHY INSTITUTIONS CHOOSE QUFI

TRUSTED INFRASTRUCTURE
Built for security, compliance and long-term reliability.

POLICY-CONTROLLED
Fine-grained control over who can do what, when and how.

VERIFIABLE BY DESIGN
Every action is independently verified and cryptographically proven.

ASSET AGNOSTIC
Works with any digital or real-world asset, today and tomorrow.

INTEROPERABLE
Connects across blockchains, payment rails, custodians and legacy systems.

BUILT TO SCALE
High-performance network for global, real-time operations.

ONE LAYER. EVERY INSTITUTION. LIMITLESS POSSIBILITIES.

QuFi connects the institutions of today with the infrastructure of tomorrow. Wherever value moves, QuFi ensures it is verified, controlled and trusted.

ANY INSTITUTION

ANY ASSET

ANY POSSIBILITY

QuFi is not built for one application. It is infrastructure for the entire digital value economy.

04.

THE QUFi PRODUCT VISION

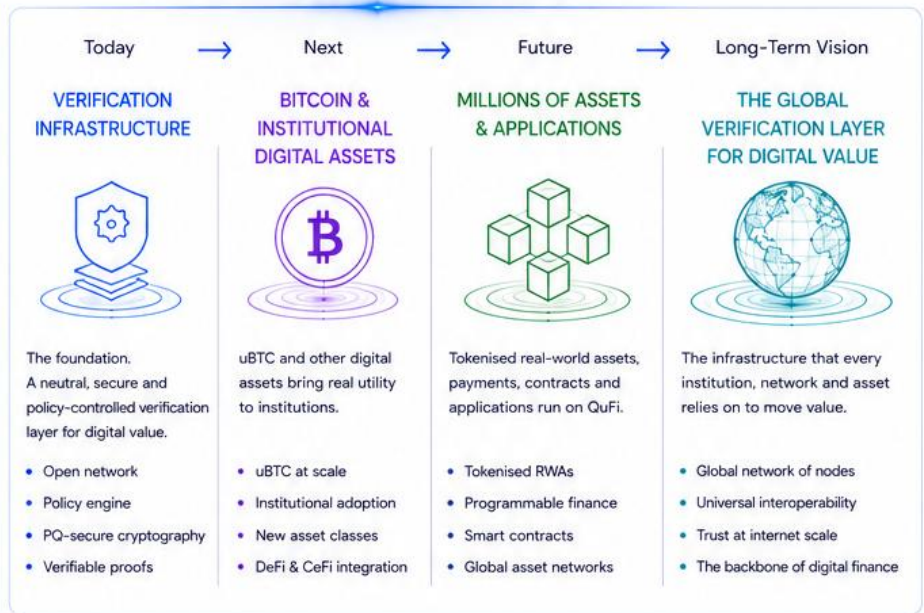

Building the Global Verification Layer for Digital Value

QuFi starts with Bitcoin-backed value and expands to power the full spectrum of digital assets, payments and financial infrastructure. Our vision is a world where every movement of value is verified, policy-controlled and trusted by design.

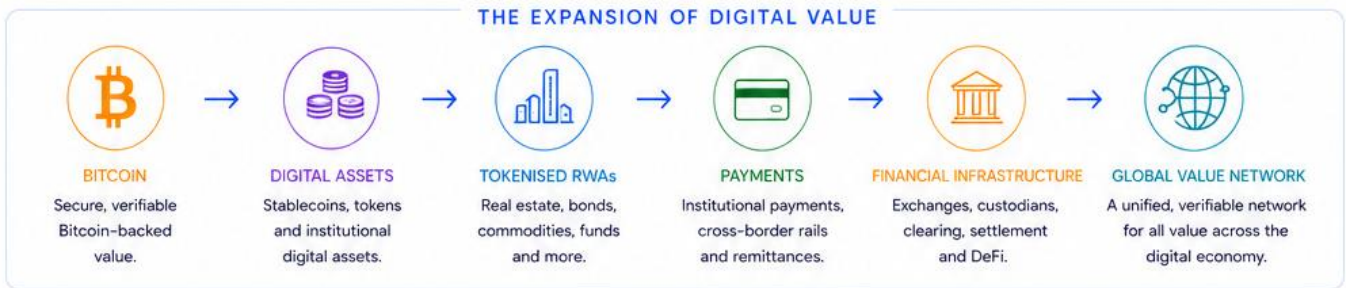

Our mission is to make digital value verifiable, controllable and universally trusted.

TODAY IS THE BEGINNING.
TOMORROW IS LIMITLESS.

THE EXPANSION OF DIGITAL VALUE

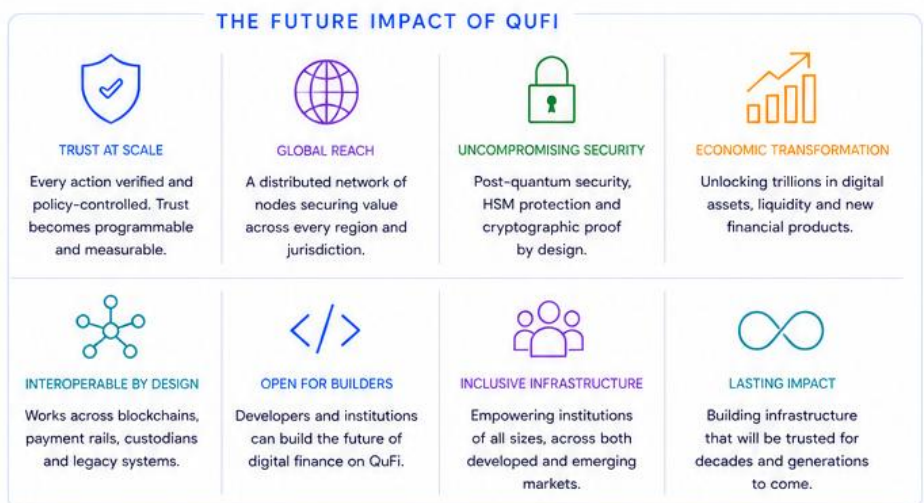

OUR AMBITION

To become the most trusted infrastructure in the world for digital value.

THE FUTURE IMPACT OF QUFi

THE INTERNET TRANSFORMED HOW INFORMATION MOVES.
QUFi IS BUILDING THE INFRASTRUCTURE FOR HOW VERIFIED VALUE MOVES.

Verified. Secure. Policy-Controlled. Future-Proof.
